

AEV SRA INTAKE FOR 5.7L AND 6.4L ENGINES

PN: AEV30206AA

1. This intake must be used in conjunction with an AEV PCM that has been programmed to take full advantage of the long and short runners.
2. Use the 6.4L throttle body only.
3. *Do not use the throttle body screws that come with the 6.4L engine. Only use the throttle body screws supplied with your AEV intake. FAILURE TO USE THE CORRECT SCREWS WILL BREAK THE INTAKE MANIFOLD AND VOID YOUR AEV WARRENTY.*
4. There are 10 seals on the bottom of the manifold, one between the intake manifold actuator and intake, and one between the throttle body and the intake. Be sure all seals are installed.
5. The intake tube from the air filter to the throttle body must be trimmed as shown below. (Remove grey portion) **IMPORTANT: IF INSTALLING A 5.7L ENGINE, ONLY TRIM INTAKE TUBE IF USING THE 6.4L INTAKE.**
