

LIGHTBAR HARNESS

FOR AEV RAM FRONT BUMPER

PLEASE READ ENTIRELY BEFORE YOU START

To guarantee a quality installation, we recommend reading these instructions thoroughly before beginning any work. These instructions assume a certain amount of mechanical ability and are not written nor intended for someone not familiar with auto repair.

1. The harness runs behind the driver's side front tire, then runs along where the grill and radiator meet.

2. When adding the bumper to the vehicle use the christmas tree clip to feed into the lowest hole in the bumper assembly.

3. Ground the harness to this position near the battery and continue to run the wire around the back of the battery in order to connect it to the Ram aux plug.
